Why Is Technology a Good Thing?

Technology has many benefits, such as improved productivity, efficient communication, facilitation of e-commerce and promotes research and development. 1)..... The automation of several manufacturing processes has led to improved production efficiency and increased productivity. This is because machines and computerized systems are not affected by human factors, such as fatigue and energy limitations.

In addition, the adoption of the latest technologies in office environments results in employee efficiency. Several computer software programs perform tasks such as accounting, data analysis, interior design and monitoring of manufacturing processes. 2).....Moreover, the adoption of mobile computing through the use of laptops, tablets and the Internet enables employees to work even when they are out of the office. This promotes productivity and results in profitability of any business.

Technology has had a significant impact on modern-day communication. Cellphones and other mobile devices keep employees and potential clients connected over long distances. In addition, business stakeholders may communicate through emails, conference calls and video conferencing, which eliminates the need for travel. 3).....

The advancement in technology has led to the growth of online businesses. Through the Internet, individuals are able to purchase goods online and await their delivery. This is convenient since it reduces physical travel to retail outlets and shopping malls. 4).....

The Internet provides access to a wide pool of information from all over the world. This is instrumental for research by students and other education stakeholders. In addition, foreign students and busy individuals may choose to take online classes in different fields. 5).....Through research, such individuals may be able to improvise an existing idea for the good of society.

Technology can be used for entertainment purposes. Electronic gadgets, such as mobile phones, televisions and computers, provide access to a variety of entertaining movies, music and sports activities. In addition, individuals can choose to play online games with friends over long distances. Technological advancements have changed the way many people watch TV, listen to music and stay up to date on current events. 6).....The news is now at a user's fingertips across many different websites. Entertainment is not only soothing to the mind but it also promotes interaction with the outside world.

Technology promotes the interaction of people through social networks like Facebook and Twitter. 7).....In addition, Internet dating sites may be a source of lifelong partners for many individuals in society.

Even though the advancement of technology may have some negative impacts on society, its advantages outweigh such demerits. Technology is an essential part of modern-day human civilization. Investment in technological advancement should be considered in order to ensure economic prosperity in society.
